
Vectors of human disease: biology and environment

What is our increasingly polluted world doing to disease vectors? What does climate change mean for the distribution and life history of disease vectors? These are crucial questions affecting all vector biologists. Why not come and discuss it at the 9th International Congress of Dipterology in Windhoek, Namibia (http://icd9.co.za/symposia-titles/)

Please contact Shüné Oliver (shuneo@nicd.ac.za) if you are interested in presenting a paper for this symposium
